RozgarSetu AI: design mock-up of the core flow

Seva First Innovation Challenge 2026 · Eastern Region · Theme: Employment, Livelihood & MSMEs

DESIGN MOCK-UP. NOT A WORKING PROTOTYPE.

All vacancies, dates, names and results on these screens are invented for illustration and are not real notices.

What this document shows

These nine screens show how a job seeker, and a reviewer, would use RozgarSetu AI. They illustrate the design in the Innovation & Implementation Plan so that evaluators can see the intended experience. No screen here is connected to real data. The build status of each part is given on the last page.

Screens and the plan features they illustrate

#	Screen	Plan feature
1	Start and language	Bengali, Hindi and English; no-account eligibility check; minimal profile
2	Vacancy finder	Source-checked opportunity finder; verification badge; Scam Shield flags
3	Vacancy detail	Source link, dates, last-checked time, checks actually completed
4	Eligibility result	Matched / Not met / Missing data / Needs manual review; Gap Coach; audio
5	Document checklist	Documents and formats the notice asks for
6	Tracker and Notice Watch	Saved jobs, reminders, alert when a notice changes
7	Report a listing	One-tap report, red-flag reasons, reference number
8	Eligibility receipt	Printable result stamped with notice version and date
9	Reviewer queue	Admin review, second reviewer for high-risk listings, decision record

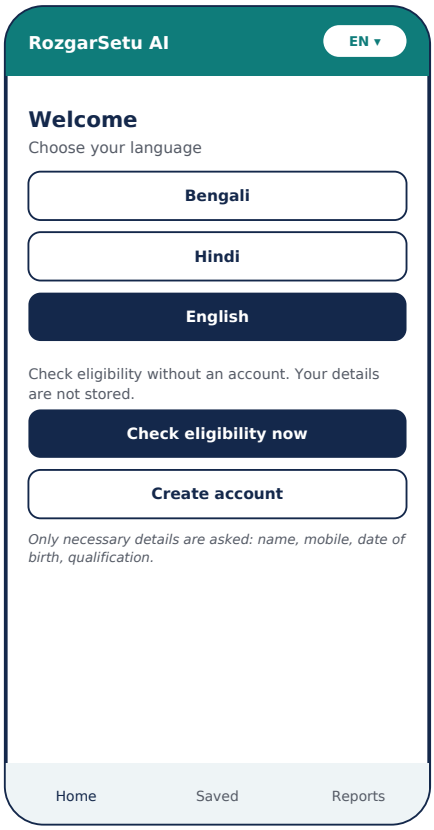

Design rules shown on every screen

- Rules decide eligibility; a language model only rewrites rule results in plain language and can be switched off.
- When a rule is ambiguous or data is missing, the screen says "Needs manual review" instead of guessing.
- Every result links to the full official notice and says it is preliminary.
- The app never submits an application for the user; the user confirms progress.
- Badges state only the checks that were actually completed.

Language note: the screens are drawn in English. Bengali and Hindi versions will be produced from reviewed translations; they are not shown here.

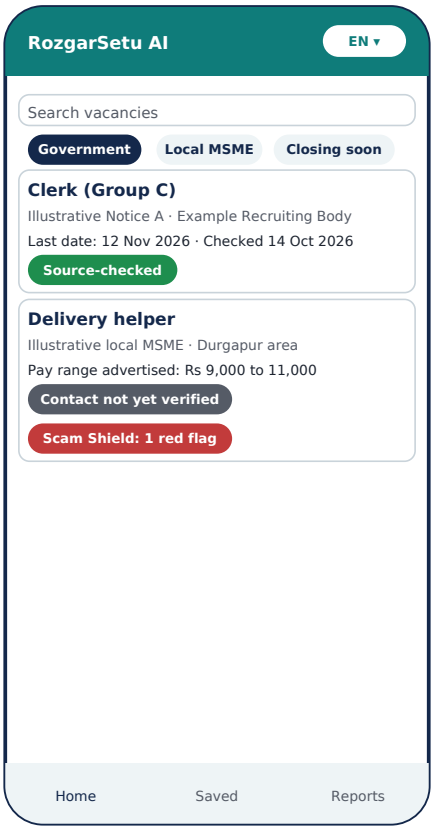

Core flow for a job seeker

Illustrative screens, screens 1 to 6

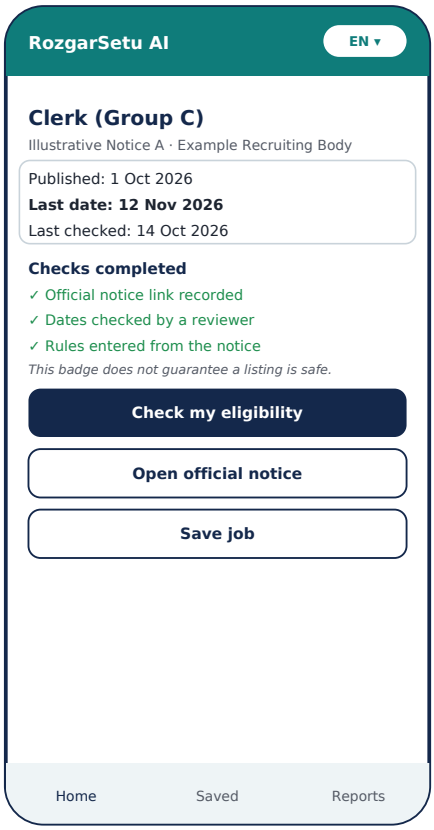

Screen 1: Start and language

Bengali, Hindi, English; no-account check

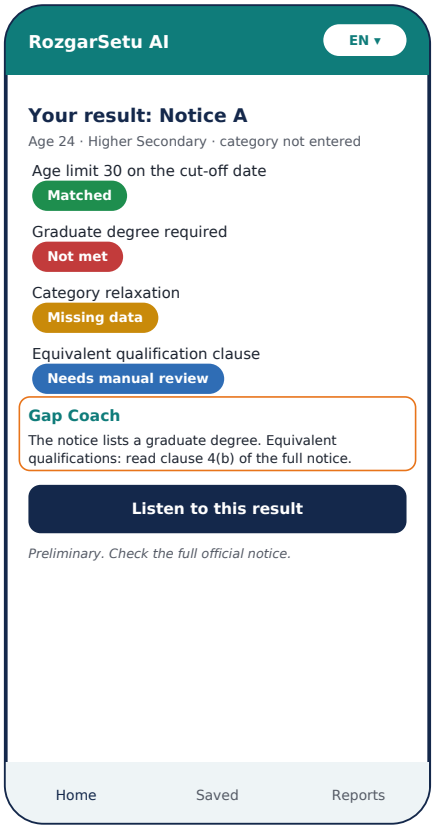

Screen 2: Vacancy finder

Verification badge and red flags shown plainly

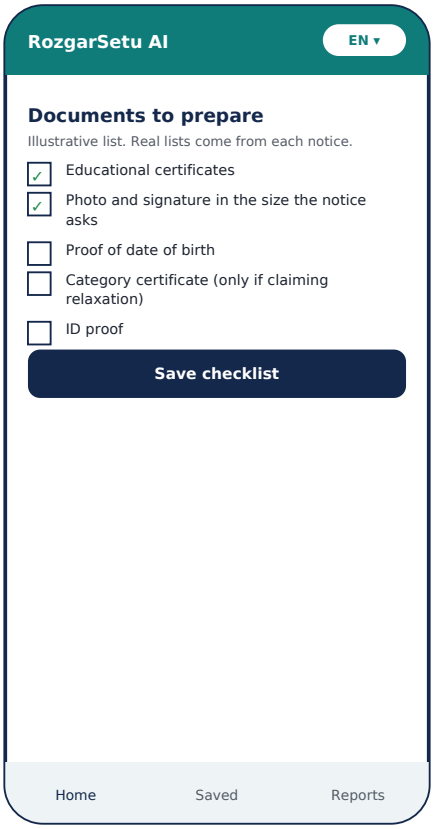

Screen 3: Vacancy detail

Source, dates and the checks actually done

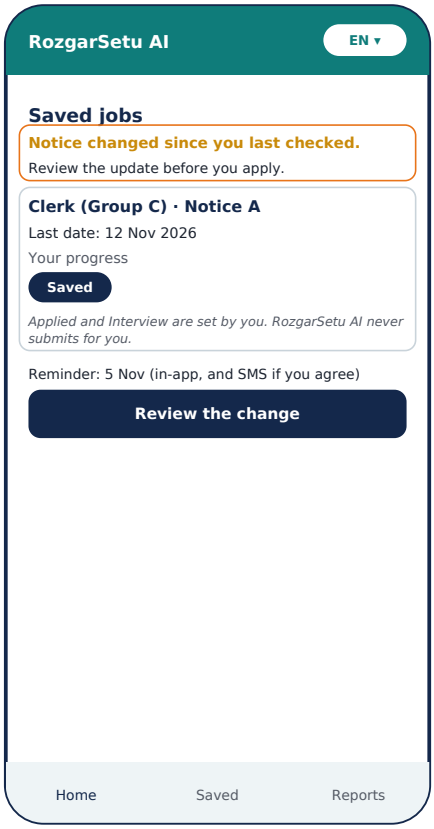

Screen 4: Eligibility result

Rules decide; the AI only rewrites in plain language

Screen 5: Document checklist

Many applications fail on paperwork, not eligibility

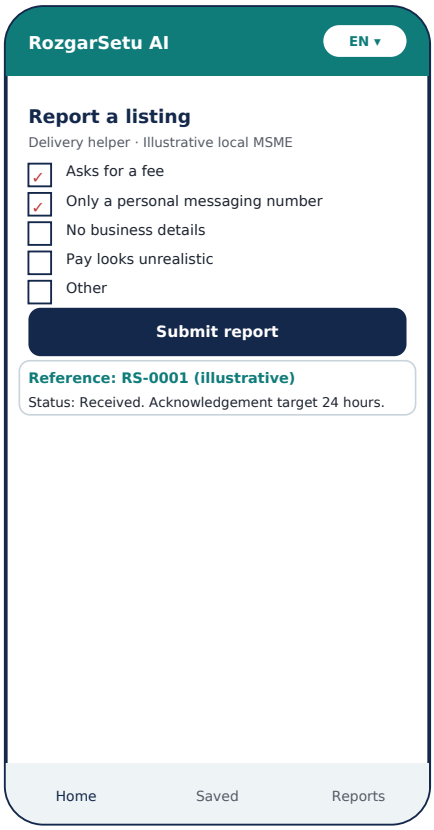

Screen 6: Tracker and Notice Watch

Alert when a deadline or rule changes

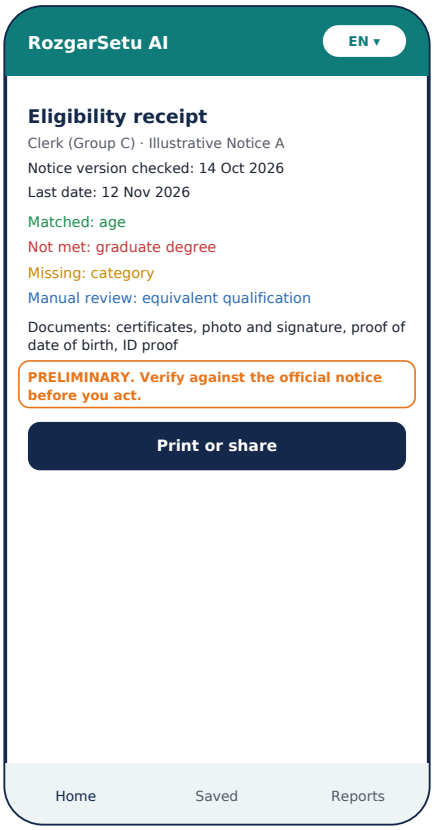

Trust, receipt and review

Illustrative screens, screens 7 to 9, and build status

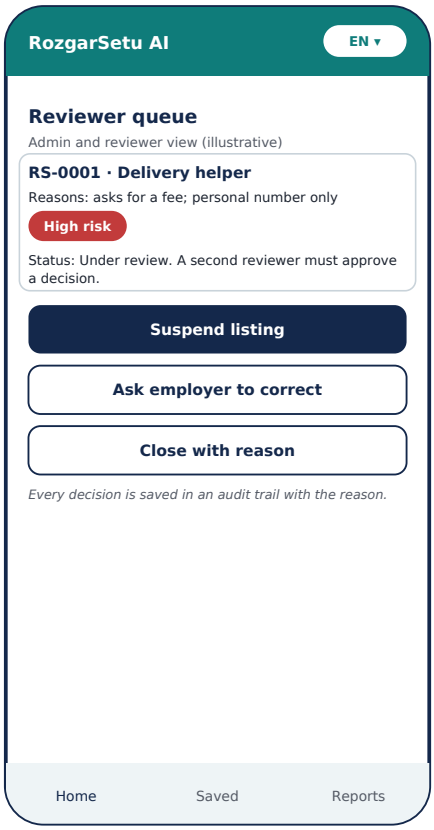

Screen 7: Report a listing

Reference number and a route to resolution

Screen 8: Eligibility receipt

Printable result a helper or cyber cafe can use

Screen 9: Reviewer queue

Second reviewer and audit trail for high-risk cases

Build status and evidence

- These screens are a design mock-up. No application code, live data source or user data sits behind them.
- The plan's schedule has the core platform in weeks 3 to 4, eligibility and tracking in weeks 5 to 6, and trust and accessibility features in weeks 7 to 8.
- Working prototype link or screen recording: [FILL IN: attach or write "not yet built"].
- Sample source-checked vacancy records and hand-checked eligibility cases: [FILL IN: number attached, or "not yet"].
- Bengali and Hindi screens will be produced from native-speaker-reviewed translations.
